Question 1: Write a program in PHP script that reads several lines of text and prints a table indicating number of one letter words, two letter words, three letter words etc. appearing in the text.

Take input from keyboard. Print first table contains two columns **word length** and **occurrences**. And print second table indicating the **number of occurrences of each different word in the text**.

Table 1	
Word length	Occurrences
1	0
2	2
3	1

Table 2	
Word	Occurrences
To	3
Is	6
The	2
